Re: Gabriel Steif v. Greyhound Lines, et al
Your file: 818.34751

Dear Mr. Pollack:

Pursuant to your request I have reviewed the following CT scans, performed on Gabriel Steif. I have also reviewed the accompanying records. My findings and opinions are as follows:

CT scan of the head without contrast dated 2/27/08: the examination was performed in the axial plane and extends from the skull base to the vertex. Only brain windows are available for review. There is no evidence of fracture and no evidence of intracranial trauma. There is multifocal cortical atrophy most prominent in the parietal regions bilaterally.

Impression: no evidence of fracture. Multifocal cortical atrophy.

CT scan of the head without contrast dated 2/29/08: the examination was performed in the axial plane and extends from the skull base to the vertex. Metallic staples are present in the occipital soft tissues of the scalp. There is no evidence of fracture and no evidence of intracranial trauma. There is multifocal cortical atrophy most prominent in the parietal regions bilaterally.

Impression: no evidence of fracture. Multifocal cortical atrophy. Metallic staples in the occipital soft tissues of the scalp.

Sincerely yours,

Lewis Rothman, M.D.
